MetaModel

Creating and maintaining a central definition of metadata for your MDM solution (commonly referred to as a data dictionary) helps enable governance and provides a self-service model for MDM stakeholders navigating your MDM solution. The MetaModel provides a simple out of the box solution for capturing metadata and making it available for consumption by MDM stakeholders.

Enable data governance and drive standards using Profisee's MetaModel for master data.

Profisee's MetaModel provides business users with easy access and management of the definitions, descriptions, and associations that describe your master data application. As your master data solution evolves, MetaModel automatically synchronizes metadata changes, ensuring stakeholders always have the most up to date information.

Profisee's MetaModel is managed as an MDM model, allowing users to manage metadata the same way they manage master data. Use the same business rules and workflows you use to manage master data to drive the management of metadata.

MetaModel captures all core metadata elements, including Models, Versions, Entities, Attributes, Attribute Groups, Hierarchies, Business Rules, Subscription Views, Flags, Users, User Groups, and Security Assignments. The MetaModel is extensible, allowing you to define and maintain additional metadata elements for your solutions, and all changes are logged for auditing purposes. Understand how changes will impact the systems that manage data in your Enterprise.

Get full visibility into your MDM solution with Profisee MetaModel.

Manage metadata

- Understand all the systems that cooperate to deliver information to your enterprise
- Understand how data in one system maps to another system and their interaction
- Capture information about systems such as business and technical owners, vendors, support contacts

Metadata Stewardship

- Manage Metadata, with Web Parts or even custom user interfaces
- Leverage Workflows and Business Rules to enforce governance and process

Easily Consumable

- Distribute as Metadata reports, batch or in real time using industry standards like SOAP, REST, and SQL Views

Extendable

- Captures all basic metadata with the ability to extend the model to meet your needs
- Support your Governance by defining which systems have business processes when change occurs

The Fastest Growing and #1 Time-To-Value MDM Platform
